TI - Removing terpene(s) from essential oils - using aq. soln. of ethanol and/
or methanol

AB - J59117593 Naturally occurring essential oil contg. terpene hydrocarbons
is treated with a hydrous soln., of ethanol and/or methanol of ca. 40-95
wt.% alcohol concn. Alcoholic soln. is treated with a porous resin or a
chemically bonded silica gel to remove terpene hydrocarbons by adsorption.

- ADVANTAGE - Essential oils free from terpenes contg. aroma or perfume
components of the related naturally occurring essential oils in a concn.
state, and having superior storage stability, are produced in a simple
appts. in high yield without causing undesirable deterioration of the
qualities of the aroma or perfume components or volatilisation loss. The
prod. is suitable for use in foods or drinks. (0/0)
